

Electric Far-infrared Heater

Panel Heater WPS-30

Sunlight warmth

WPS-30's far-infrared penetrates evenly on and into surfaces just like sunlight.

Wide heating

Due to the large radiation panel, WPS-30 can effectively heat up wider area.

Safe surface temp.

WPS-30 reduces the risk of fire by lower surface temperature of its panel. The surface temperature of typical electrical heater should be 750°C, but WPS-S's shall be 300°C.

No air movement

WPS-30 generates straightforward infrared heat which is unaffected by air flow, thus comfortable and dust-free environment can be accomplished.
